

#### **Specifications**

Construction project:

Architect/client:

#### Preliminary remarks:

Work is carried out using products from the Minden-based company Triflex GmbH & Co. KG.

This offer is for the procurement and installation of the interior deck coating system Triflex CPS-C+. Two versions are available for selection: Version 1: > 1.5 mm as per DIN EN 13813

Version 2: > 2.5 mm as per DIN EN 1504-2 (OS 8)

Compliance with all applicable guidelines is taken into account and required for the different recommended system designs using Triflex products.

Before the contract is awarded, contractors must prove that they have been trained in the application of Triflex products. Otherwise, instruction by a trainer shall be provided on-site.

If work is to be carried out with subcontractors, the client or his representative must be informed of this in good time before the start of work. Moreover, a party in possession of an SIVV certificate must be present at the construction site at all times. The certificates must be held available accordingly.

The quantities contained herein shall be checked on the building site.

The substrate must be pre-treated in accordance with the specifications in the Repair Guideline (Rili SIB). The following consumption specifications therefore relate to a roughness depth of  $R_t$ = 0.5 mm. In case of increased roughness depths, scratch and levelling coats must be costed separately.

Proceed as per DAfStb Rili SIB Part 3, Annex A to determine adhesive strengths and as per DAfStb Rili SIB Part 2, table 2.5 for substrate pre-treatment.

Billing shall be based on measurements conducted jointly by the contractor and client.

The coating system must be applied so as to prevent rainwater from penetrating the system structure in the event that work is interrupted.

For disposal of rubble, the cartage and landfill costs shall be included in the individual prices or itemised separately.

Concerns about prior work performed by other contractors shall be communicated to the client in writing immediately, ideally before work begins.

It is recommended that the bidder view the work site prior to submitting a tender.

If alterations or special work not included herein become necessary after work has commenced, detailed notification shall be given before going ahead with such alterations or special work, and the work shall subsequently be billed separately.

Unless explicitly stated otherwise, all work shall be regarded as a comprehensive turnkey service, including the supply of all required materials and ancillary services.

Multi-storey car park coatings and traffic markings are subject to constant loads and wear in accordance with the level of use.

#### Specifications

The system build-up must be adapted by the expert planner to meet the project-specific requirements. Detailed tender texts must be created by the planner on his or her own authority. There is no specific project consultation associated with the issue of these draft specifications. The preparation of drafts is a non-obligatory service provided by Triflex. Any legal claims from this service are excluded.

The bases for the implementation of concrete repairs which are relevant to stability, are the rules and directives introduced in the German federal states as Technical Building Regulations as per VV TB, Part A, No. A 1.2.3.2 and VV TB, Part C, No. C 3.12.

Furthermore, all work shall comply with the General Construction Contract Procedures (VOB) - Part C: General Technical Specifications in Construction Contracts (ATV), with particular reference to DIN 18349 - Repair work on concrete structures, 09/2016 version.

The contract comprises the following components:

- Specifications
- System description, system drawings and manufacturer's product information
- DIN 18202 Tolerances for building construction
- DIN 18532 Waterproofing of concrete areas trafficable by vehicles
- The rules and directives introduced in the German federal states as Technical Building Regulations as per VV TB, Part A, No. A 1.2.3.2.
- DIN 18533 Waterproofing against non-pressurised surface water
- Building code regulations
- Accident prevention regulations
- German Construction Contract Procedures (VOB), Part B
- in the versions valid at the time of conclusion of the contract.

System and product characteristics:

- Surface protection system with two versions with epoxy resin (EP) base Version 1: ≥ 1.5 mm as per DIN EN 13813 Version 2: ≥ 2.5 mm as per DIN EN 1504- 2
- Mechanically strong
- Seamless
- System-integrated detail solutions
- Full-surface adhesion and resistant to infiltration from below
- Cold-applied
- Ready for pedestrian traffic after approx. 20 hrs, ready for vehicle traffic after approx. 2 days

#### **Specifications**

Performance properties of Triflex CPS-C+, version 2 (OS 8) as per DBV data sheet for multi-storey car parks and underground car parks (2018) with additional performance properties:

Line	Performance properties as per	Test method as	Requirement	Triflex CPS-
	DIN EN 1504-2	per		C+
1	Linear shrinkage	DIN EN 12617-1	≤ 0.3 %	Not required
2	Compressive strength	DIN EN 12190	Class I: ≥ 35 N/mm <sup>2</sup>	Not required
3	Abrasion resistance	DIN EN ISO 5470-1	Mass loss <3000 mg, friction wheel: H22/1000 cycles/load: 1000 g The requirements of DIN EN 13813 must also be met (see also A.3.1)	fulfilled
4	CO <sub>2</sub> permeability	DIN EN 1062-6	s <sub>d</sub> > 50 m	fulfilled
5	Water vapour permeability	DIN EN ISO 7783	Class II: 5 m ≤ s <sub>d</sub> ≤ 50 m	fulfilled
6	Capillary water absorption and water permeability	DIN EN 1062-3	w < 0.1 kg/(m²*h <sup>0.5</sup> )	fulfilled
7	Adhesive tensile strength as per test for temperature change tolerance Thermal cycling with alternating freezing/thawing without exposure to de-icing salt	DIN EN 13687-3	After thermal cycling a) No cracks, bubbles, detachment b) Pull-off trial ≥ 2.0 (1.5) N/mm <sup>2</sup>	fulfilled
	Adhesive tensile strength as per test for temperature change tolerance For applications outdoors under the influence of de-icing salts			
8	Thunder shower exposure (temperature shock) (10x) and thermal cycling with alternating freezing/thawing with exposure to de-icing salt (50x)	DIN EN 13687-2 DIN EN 13687-1		fulfilled
9	Resistance to strong chemical attack Class I: 3d without pressure Test liquids: Groups 1, 3 and 10 according to DIN EN 13529	DIN EN 13529	24 hrs after removing the coating from the test liquid, reduction of the hardness by less than 50 % when measuring after the indentation hardness test as per Buchholz, DIN EN ISO 2815, or Shore hardness, DIN EN ISO 868	fulfilled
10	Impact strength	DIN EN ISO 6272-2	After loading, no cracks and no flaking; Class I: ≥ 4 Nm	fulfilled
11	Fire classification after application	DIN EN 13501-1	Minimum requirements: Class E <sub>fl</sub>	fulfilled
12	Grip / slip resistance	DIN EN 13036-4	Class III: > 55 units tested in wet condition (outside)	fulfilled
13	Fire classification after application	DIN EN 13501-1	Minimum requirements: Class E <sub>fl</sub>	Class B <sub>fl</sub> -s1
14	Non-slip class	DIN 51130		V1: R10 V4
15	Fire classification of the markings	DIN EN 13501-1		B <sub>fl</sub> -s1

### Specifications

Item no.	Quantity	Subject of service	Unit price EUR	Total price EUR
1		General information		
1.1	Lump sum	Building site preparation	Lump sum	
1.2	Lump sum	<b>Container</b> Delivery, set-up, provision and off-site transportation of a material and device container.	Lump sum	
1.3	Lump sum	<b>Power supply</b> Provision of power supply for alternating and three- phase current, to be removed on completion of the building project.	Lump sum	
1.4	Lump sum	Water supply Provision of water supply for the necessary cleaning tasks, to be removed on completion of the building project.	Lump sum	
1.5	Lump sum	Fence around building site Provision of fence for the entire period of the building project, to be adapted as required by the individual work stages.	Lump sum	
1.6	Lump sum	<b>Re-routing of traffic</b> Implementing measures to re-route traffic, such as road signs, traffic light system etc., setting up any necessary devices, adapting in accordance with progress of the building project and removing on completion of the building project.	Lump sum	
2		Structure and substrate inspection		
2.1	Lump sum	<b>Cavities</b> Checking for cavities by tapping the existing concrete surfaces with a hammer or chain, and marking any areas accordingly.	Lump sum	
2.2	Lump sum	Adhesive tensile strength Determining and recording the specified adhesive tensile strength of the existing substrate using a suitable gauge (e.g. a Freundl unit). Number of measurements:	Lump sum	
2.3	Lump sum	<b>Compressive strength</b> Determining and recording the compressive strength of the existing concrete substrate using a Schmidt Hammer.		
		Number of measurements:	Lump sum

Item no.	Quantity	Subject of service	EUR	EUR
			Amount carried forward:	
2.4	Lump sum	<b>Moisture content</b> Determining and recording the moisture content of the existing concrete substrate using a suitable gauge (e.g. electronic moisture meter). Number of measurements:	Lump sum	
2.5	Lump sum	<b>Core sample</b> Determining the layer configuration and each of the layer thicknesses by removing a core sample. Number of measurements:	Lump sum	
2.6	Lump sum	Analysis of core sample Determining the chloride content in the substrate by testing the core sample (see Item 2.5). Number of measurements:	Lump sum	
2.7	Lump sum	<b>Checking gradient and unevenness</b> Checking the existing substrate for sufficient gradient, formation of puddles and unevenness.	Lump sum	
2.8	Lump sum	<b>Site journal with continuous measuring</b> Provision of suitable measuring devices for the continuous measuring of air humidity, ground temperature, air temperature and to determine the dew point throughout the building project, incl. a site journal with logging of measured values.	Lump sum	
3		Substrate pretreatment		
3.1	m²	<b>Milling</b> Removal of any contaminated surfaces on the concrete with a suitable milling machine approx. 3– 5 mm in depth in order to ensure the adhesive property and soundness of the substrate incl. acknowledgement of delivery, off-site transportation and proper disposal of the milled material.	/m²	
3.2	m	Milling in proximity to construction and settlement joints Machine milling, cm wide, approx. 3–5 mm in depth including acknowledgement of delivery, off- site transportation and proper disposal of the milled material. (See Triflex system drawing CPS-C+-1907 and CPS-C+-1908 or CPS-C+-1909)	/m

			Amount carried forward:	
3.3	m²	<b>Shot-blasting</b> Cleaning of entire surface, incl. construction and settlement joint areas by Blastrac shot-blasting crosswise, incl. machine-sanding junctions, cleaning of surfaces, off-site transportation and proper disposal of any blasting residue.	/m²	
3.4	m²	<b>Grinding</b> Preparation of the substrate by grinding with suitable abrasive tools, incl. cleaning, acknowledgement of delivery, off-site transportation and proper disposal of any rubble.	/m²	
3.5	m	<b>Grinding the junctions</b> Preparation of the substrate of the wall junctions and details by grinding with suitable abrasive tools incl. cleaning, acknowledgement of delivery, off-site transportation and proper disposal of any rubble. Junction height: cm	/m	
3.6	m	<b>Joint milling machine/joint hook</b> Removal of any joint sealant as required using joint milling machine or joint hook.	/m	
3.7	m	<b>Levelling</b> Levelling of joint sealant in still functional construction joints by filling with comparable material or Triflex Pox mortar, or removal of any oozing or excess material in order to achieve a flush finish.	/m	
3.8	m²	<b>Preparing metal substrates</b> Thoroughly abrade the metal substrates with Triflex Cleaner and additionally roughen the surface. Consumption: min. 0.20 l/m <sup>2</sup>	/m²	Unit price
3.9	m	Sealing coat To prevent the possibility of water infiltration or detachment around the details (wall junctions, details, joints), a stop must be cut at the transition from the surface coating to the detail waterproofing. It must be at least 15 mm deep and 5 mm wide. The cut must be made before beginning waterproofing/coating work.	/m
